Empowering Quality Engineering

OUR SERVICES

Functional Testing

Our in-house experts are proficient in defining test strategies, test plans to ensure maximum test coverage right from beginning of requirement phase to deliver fully functional, bug-free and quality release of the product to end users.

Regression Testing

With the increasing demand for agility in development processes, regression test suites are very critical to ensure that the outcome of new enhancements is not impacting the existing quality of the product. Impact analysis of any new implementation is the core of our regression test suites.

Integrated System Testing

We offer integrated system testing and QA services that define, establish and validate functionality of a software product against system, business, and deliverable specifications. Our experience with latest tools & technology and focused approach on integration, adherence to design, interoperability, and potential exceptions during the system testing makes the application robust and consistent.

OUR SERVICES

Component Testing

Our approach covers verification of the any reusable, focused, domain and commercial components irrespective of their size and complexity under various situations. It helps us to ensure that every individual component of the product works to its full potential and meets all quality parameter of its functionality, performance, security and integration aspects.

Exploratory Testing

We understand the fact of lack of documentation, well-defined requirements, and QA involvements in the later stage of the product life cycle due to N number of business reasons. We begin our QA process with bare minimum details and start exploring product to build system understanding, defining test strategies, documenting test plans, finding defects quickly and speed up the delivery to the competitive marketplace.

Database Testing

Our technical expertise and sound testing procedures of database testing ensure the data validity, integrity, accuracy and best performance of the application database across all platforms. We have developed our own methodology and proficiency in DB testing which helps in getting accurate results of testing ETL processes, data analytics, recommendation engine algorithm, data migration, and GDPR compliance testing.

FLEEK
IT Solutions

OUR APPROACH

Listen

Your vision explained over a cup of coffee (or beer). More like an icebreaker of sorts. With great discussions come great solutions.

Strategize

We understand the rules of the game and set the action plan with you. (We say "No" to a lot of things that are not important immediately)

Planning

The planning process starts with defining test sets, regression sets, test scenarios and identifying automation tools, management tools etc.

Build

Start with exploratory tests, build test cases, test script, create an automation script for functional and non-functional requirements.

Execution

Execute test cases, run automated tests, prioritize and report findings with stakeholders. Re-iterate execution until it is ready to go-live.

Go-Live

We support you in launching the product successfully and then we talk about the action plan for the next phase! Coffee!
